Abstract of corresponding document: **EP0989009**

The automobile compartment (12) is delimited by a roof (20) extending horizontally in front of the upper window formed by transverse slats (26). These slats are articulated to each other and can be driven by a front slat (40) to slide longitudinally to the rear and partially uncover the compartment. The slats are received in a storage cassette (28) in the rear of the roof (8). The cassette is retractable into a housing (56) in the rear door lower panel.
